Summary

Full-stack developer who has shipped three production web apps on his own – a real-time team workspace, an AI career platform, and an AI job tracker. Comfortable owning a feature end to end: schema design, API, frontend, and deployment. Core stack: React, Next.js, TypeScript, Node.js/Express, PostgreSQL/Supabase, MongoDB, plus Groq and OpenRouter for AI features.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, C++

Frontend: React (18/19), Next.js 14, Redux Toolkit, Zustand, Tailwind CSS, Radix UI, shadcn/ui, React Hook Form, Zod

Backend: Node.js, Express.js (v4 & v5), REST APIs, Socket.io

Databases: MongoDB, Mongoose, PostgreSQL, Supabase

Authentication & Security: JWT, Google OAuth 2.0, bcrypt, Helmet, Rate Limiting

AI & Integrations: Groq API, OpenRouter, Razorpay, Cloudinary, Nodemailer, Google APIs, Cheerio

Tools & Deployment: Git, GitHub, Postman, Vercel, Netlify, Render

Projects

Valtrexa — AI Career Management Platform

Live | GitHub

React 19, TypeScript, TanStack Start, TanStack Router, Supabase, PostgreSQL, OpenRouter, Zustand, Tailwind CSS

- TanStack Start app (file-based SSR) with 15+ views for job tracking, recruiter CRM, and interview prep, on a 50-table Supabase/PostgreSQL schema with row-level security.
- Job-import layer behind a shared provider interface — pulls listings directly from Greenhouse and Lever board APIs, with Cheerio scraping as a fallback for other sources.
- OpenRouter-based resume analysis with a multi-model fallback chain that retries free-tier models on rate limits, plus an engine that auto-schedules day 3/7/14 follow-ups.

DsSync Hub — Real-Time Team Collaboration Platform

Live | GitHub

React 19, Redux Toolkit, Node.js, Express, MongoDB, Socket.io, Razorpay, Groq API

- Multi-tenant workspace app (16 MongoDB models — workspaces, channels, tasks, notes, meetings) with Socket.io real-time chat: room-scoped messages and typing indicators.
- Groq-based AI layer that turns free text into structured tasks, summarizes long chat threads, and rewrites drafts, gated by a per-user usage-limit middleware.
- Razorpay subscription billing with order creation and plan upgrades; API hardened with Helmet, rate limiting, and input sanitization middleware.

JobPilot — AI Job Application Tracker

Live | GitHub

Next.js 14, TypeScript, Express 5, MongoDB, Groq API, Cheerio

- Cheerio-based scraper that extracts job title, company, location, and salary from any listing URL using OpenGraph tags, microdata, and CSS-selector fallbacks.
- Groq (Llama 3.3 70B) generates follow-up emails and job summaries from saved applications, with request timeouts and structured error responses.
- Drag-and-drop Kanban pipeline (DnD Kit + Redux Toolkit), automated node-cron reminders, and JWT + Google OAuth authentication.

Experience

Frontend Developer Intern

Jul 2025 – Aug 2025

InternPe | Remote

- Shipped responsive UI components for desktop and mobile using HTML, CSS, and JavaScript; improved layout and interaction quality across client-facing interfaces.
- Delivered frontend features iteratively within an agile team, fixing UI issues and improving usability across multiple product flows.

Education

Master of Computer Applications (MCA)

Expected June 2026

IIMT Group of Colleges, Greater Noida | CGPA: 8.28 / 10

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks
